A photograph of the National Arts Centre in Tokyo, Japan, designed by Kisho Kurokawa in 2007. The building is a large, curved structure with a facade of vertical glass panels. A prominent feature is a tall, conical glass tower that tapers to a point, situated in the center of the building's facade. In front of the building is a circular, flat-roofed structure that serves as an entrance or plaza. The foreground is a lush green lawn with a low hedge and several trees. A few people are visible walking near the entrance. The sky is overcast.

A photograph of the Myriad Crystal Center in Lisbon, Portugal. The image shows a modern architectural structure with a complex white steel framework. A prominent feature is a glass-enclosed walkway or bridge that spans across the structure. The building has a curved facade with many windows. In the foreground, there are palm trees and a paved area. The sky is clear and blue.

ETFE

Ethylene tetrafluoroethylene (ETFE) is a fluorine-based plastic. It was designed to have high corrosion resistance and strength over a wide temperature range. ... ETFE has a relatively high melting temperature and excellent chemical, electrical and high-energy radiation resistance properties.

This material is normally used in conjunction with a steel framed system.
